PROFESSIONAL SUMMARY

Senior Full-Stack Software Engineer and System Architect with 5 years of experience delivering scalable SaaS, enterprise, and AI-powered platforms across debt recovery, POS, HRMS, e-commerce, finance, and automation domains for US, European, and MENA markets. Skilled at architecting multi-tenant systems, leading cross-functional teams, and embedding agentic AI workflows into production software. Creator of two open-source frameworks, ANGUNET and Daedalus; ANGUNET is adopted internally at Cedar Financial to power its Role Permission System. Known for translating complex business requirements into clean, maintainable architecture with measurable outcomes.

OPEN SOURCE FRAMEWORKS LAUNCHED

ANGUNET — Full-Stack Web Framework (Creator & Founder)

Open-source full-stack framework combining Angular, .NET, SQL Server, MongoDB, Docker, and MCP support to help developers scaffold production-ready projects with less code. Scaffolds a complete project in seconds via "npx angunet project-name", with AI-ready workflows and a guided startup experience. Actively maintained on NPM (v1.0.2+).

Daedalus — AI Orchestration Framework (Creator & Founder)

Open-source AI framework, currently in beta, that sits as an intelligent layer on top of any LLM, giving developers persistent memory, context management, and agentic reasoning out of the box. Installed with a single command, "npx daedalus", to equip an application with structured LLM handling and memory persistence.

TECHNICAL SKILLS

Languages & Frameworks: .NET, ASP.NET Core, ASP.NET Zero (ABP), C#, Angular, React, TypeScript, JavaScript, HTML5, CSS3
Architecture & Design: Microservices, Clean Architecture, Domain-Driven Design (DDD), SOLID Principles, Multi-Tenant Architecture, REST APIs, gRPC
Databases: SQL Server, MongoDB, NoSQL, Database Performance Optimization, Multi-Database Management
Cloud & DevOps: Microsoft Azure, Docker, Kubernetes, CI/CD Pipelines, Redis, Git
AI & Development Tools: Agentic AI, Model Context Protocol (MCP) Servers, LLM Integration & Token Optimization, RAG, Prompt & Context Engineering, Claude Code, GitHub Copilot, Cursor
Other Tools: Twilio APIs, SignalR, Hangfire, System Architecture Design

PROFESSIONAL EXPERIENCE

Senior Software Engineer — Cedar Financial	March 2026 – Present
- Developing digital debt collection and recovery platforms, building secure, high-performance systems for transaction management, business operations, and financial reporting. - Architecting scalable, AI-enabled backend and frontend systems, incorporating Model Context Protocol (MCP) integrations and AI-driven content workflows. - Driving engineering standards and delivery velocity for enterprise-grade financial SaaS applications in the debt recovery domain. Key Projects: Consumer Portal: Built a digital portal enabling consumers to manage and resolve their accounts as part of Cedar's debt recovery ecosystem. Collect Ware: Developed an internal debt collection system used by Cedar's collections team to manage and track recovery workflows. Cedar_RPS (Role Permission System): Designed and built Cedar's first company-level Role Permission System, scaffolded and delivered using ANGUNET, the full-stack framework I created. Payment Portal: Built a secure payment portal enabling clients to pay off their debts online.	
Software Engineer — Solvefy	May 2025 – March 2026
- Engineered scalable SaaS and enterprise applications using Angular and .NET across monolithic and microservices architectures, leveraging the ABP Framework and ASP.NET Zero. - Spearheaded multi-database management (SQL Server and MongoDB) and implemented high-performance gRPC-based communication across Inventory, E-commerce, HRMS, and AI Automation domains. - Championed Clean Architecture and SOLID principles to optimize system performance and reduce latency, while mentoring cross-functional teams to accelerate product delivery.	

Key Projects:

- **NOKNOK (SaaS POS Platform – Lebanon):** Built a .NET microservices-based POS system with SQL and MongoDB managing sales, purchases, inventory, and delivery workflows.
- **Twilio Call Center:** Built a real-time call center solution using Twilio APIs with .NET, Angular, and SQL to improve call handling efficiency.
- **AutoApply:** Developed an automated job-application tool using React and .NET that generates CSV-driven application workflows to increase hiring rates.
- **PMS (HR Management System):** Contributed to an HR management system built on ASP.NET Zero (ABP), improving employee management processes.
- **Fastlane (Spain):** Served as lead developer on an e-commerce system built with ASP.NET Zero (ABP) supporting multiple clients and 500+ customers.

Software Engineer (Lead Angular Developer) — EraTech

October 2022 – May 2025

- Developed and enhanced large-scale, subscription-based POS and QSR systems for high-volume US clients, ensuring high-performance transaction processing and real-time inventory management.
- Designed and implemented robust multi-tenant, multi-database architectures using .NET and Angular to support scalable SaaS deployments across complex environments.
- Led the frontend team in establishing core component libraries and optimizing state management, translating QSR business logic into modular, low-latency features that improved system uptime and accelerated delivery.

Key Projects:

- **BLOCKPOS (SaaS POS Platform – USA):** Developed a POS system using .NET with Clean Architecture, managing SQL databases for sales, billing, and inventory operations.
- **BLOCK-DailyBook:** Built an accounting and bookkeeping system using .NET with Clean Architecture, handling SQL databases for business bookkeeping.
- **BLOCK-QSR:** Created a quick service restaurant (QSR) system using .NET with Clean Architecture to streamline order and restaurant management workflows.
- **BLOCK-ECOM:** Contributed to an e-commerce project built with .NET and Angular.

Frontend Developer — Sizdom Technologies

August 2021 – October 2022

- Developed responsive, high-performance web applications using Angular, React, HTML5, CSS3, and JavaScript, focused on intuitive user experiences and cross-browser compatibility.
- Built reusable component libraries in Angular and React to accelerate UI development and maintain design consistency.
- Optimized frontend performance through efficient state management, lazy loading, and code splitting, improving application scalability and usability across devices.

Key Projects:

- **Blogs App:** Designed and developed a full-featured content publishing web app with a responsive UI, intuitive post management, and optimized page load performance using Angular and custom CSS.
- **HTML/CSS Custom Design Library:** Built a reusable library of custom web components and design templates using HTML5, CSS3, and JavaScript, reducing UI development time across multiple projects.

EXTERNAL PROJECTS

Independent full-stack projects spanning inventory, healthcare, and HR domains, built with .NET, SQL Server, and Angular.

- **Inventoro (Inventory Management):** Full-stack inventory management system built with .NET, SQL Server, and Angular for stock tracking, purchase orders, and real-time reporting.
- **Health-Clinic (Clinic Management System):** Clinic management platform built with .NET, SQL Server, and Angular for patient records, appointment scheduling, and billing.
- **HR-Handler (HR Management System):** HR management application built with .NET, SQL Server, and Angular for onboarding, attendance tracking, and payroll.
- **EmployeeCarries (Employee Management System):** Employee management system built with .NET, SQL Server, and Angular for employee profiles, department assignments, and performance tracking.

EDUCATION

Bachelor of Science in Information Technology

CGPA: 3.33 / 4.0
